SHADE CHANGE

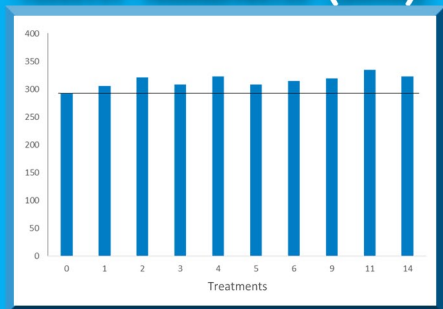

- Hydra Pearl (6% Hydrogen Peroxide) 15 minute treatments compares to Colgate Optic White (9% Hydrogen Peroxide) 30 minute treatments.
- Whitening time is cut in half with better whitening performance!
- In only 10 days, 7 whiter shades can be achieved!

SHADE CHANGE

- Hydra Pearl (6% Hydrogen Peroxide) 15 minute at-home treatments compares to Opalescence Boost (40% Hydrogen Peroxide) in-office treatments.
- Even with a shorter treatment time, the at-home treatment achieves more changes in shade than two in-office whitening treatments!
- The lower concentration of Hydrogen Peroxide results in a lower chance of tooth sensitivity.

TOOTH HARDNESS (KHN)

- Hydra Pearl (6% Hydrogen Peroxide) prevents tooth demineralization from occurring.
- Even after 14 treatments, tooth surface hardness does not decrease.
- Hydra Pearl (6% Hydrogen Peroxide) has added Fluoride to increase the surface hardness of teeth.
